

TRAITEMENT CHIRURGICAL DES INFECTIONS RACHIDIENNES

Benjamin Bouyer

Service de chirurgie orthopédique et traumatologique HEGP

Sommaire

- 1 De quoi parle-t-on ?
- 2 Quand opérer ?
- 3 Comment opérer ?
- 4 Quel avenir ?

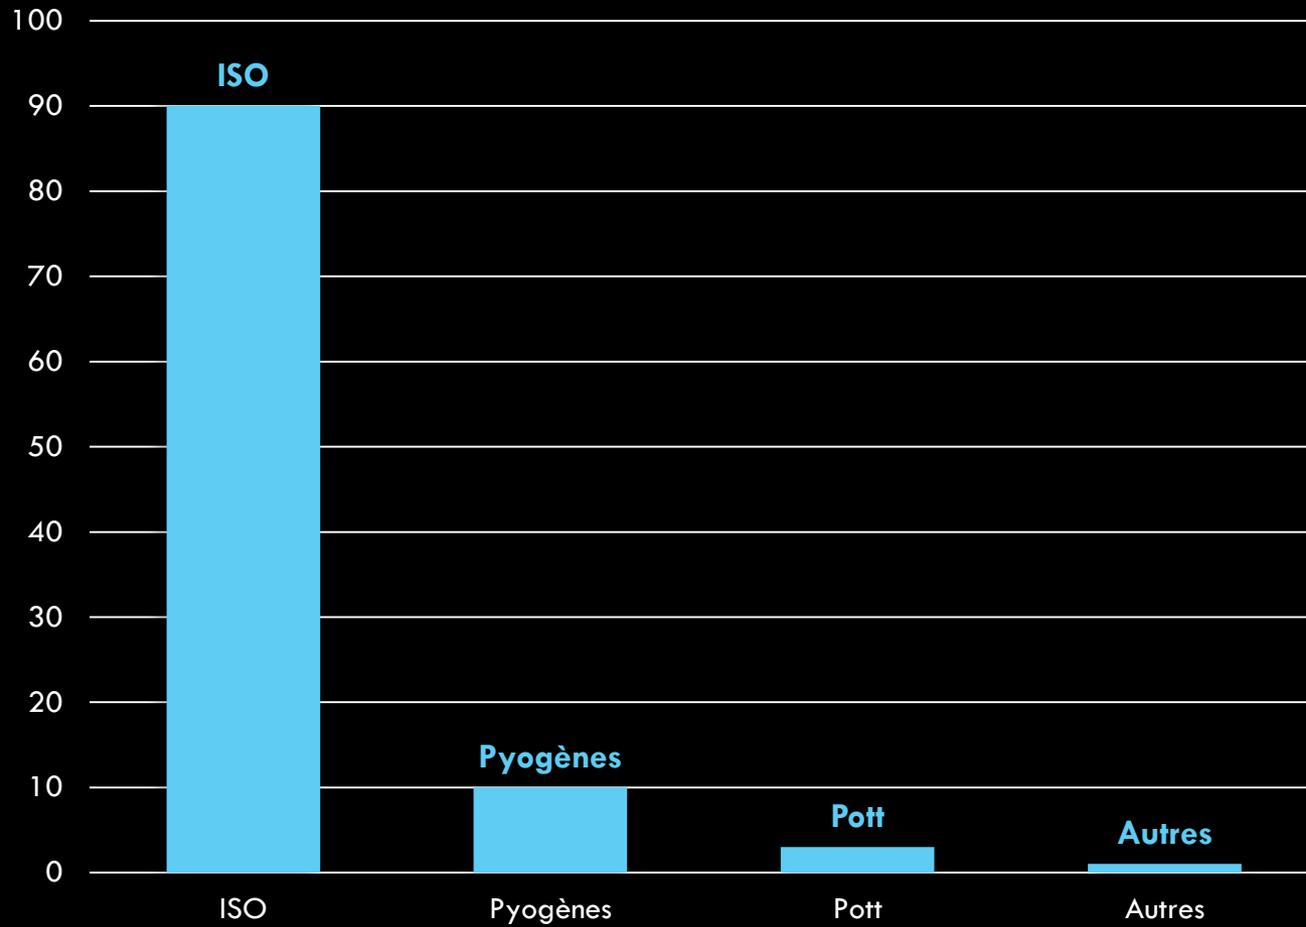

Sommaire

- 1 De quoi parle-t-on ?

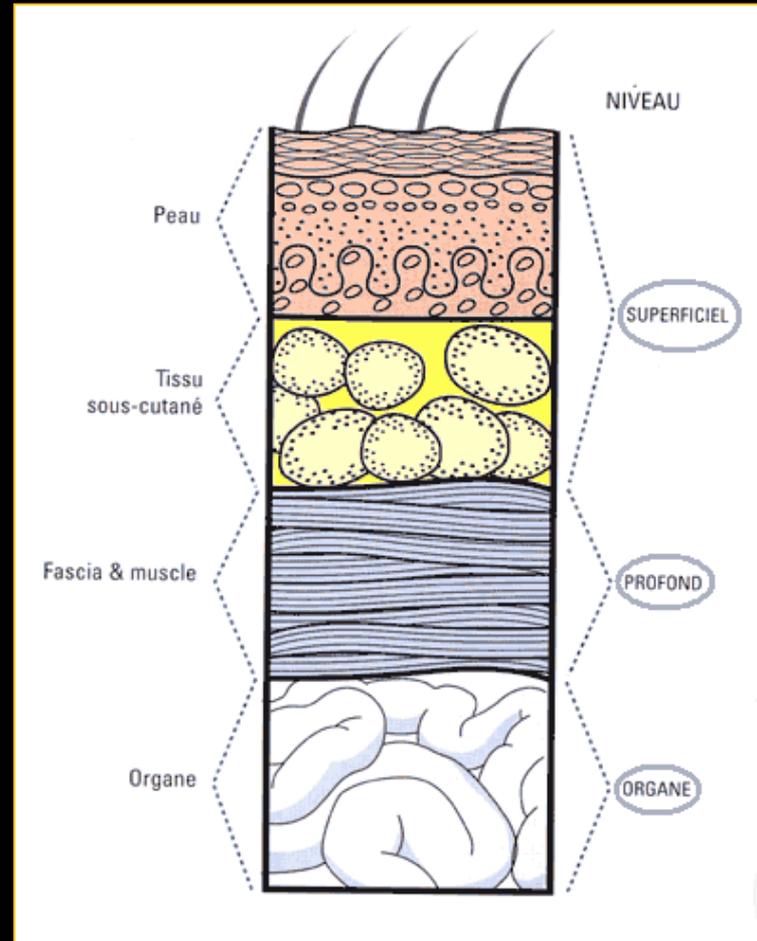

Pathologies

- Infections du site opératoire
- Spondylodiscites à pyogène et abcès épiduraux
- Maux de pott
- Spondylodiscites rares (fongiques, mycobactéries atypiques...)

Pathologies

ISO, KESKECE ?

ISO

- 2 à 10 % des opérés
- FDR multiples : Age, comorbidités, lourdeur du geste...

Scoliosis Research Society Morbidity and Mortality Committee. Rates of infection after spine surgery based on 108,419 procedures: a report from the Scoliosis Research Society Morbidity and Mortality Committee. Smith JS. Spine. 2011

Risk factors for surgical site infection in the patient with spinal injury, Blam, OG, Spine 2003

Pathogen	Monomicrobial infection (n; % monomicrobial)	Polymicrobial infection (n; % polymicrobial)
Staphylococcus aureus	30 (46)	3 (15)
Positive blood culture	9	1
Wild type	4	2
Methicillin-susceptible	25	1
Methicillin-resistant	1	0
Fluoroquinolone-resistant	1	0
Rifampicin-resistant	0	0
Coagulase-negative staphylococci	10 (15.4)	5 (25)
Methicillin-susceptible	2	5
Methicillin-resistant	8	2
Fluoroquinolone-resistant	2	1
Rifampicin-resistant	0	0
Enterobacteriaceae	10 (15.4)	15 (75)
Positive blood culture	1	1
AmpC overproducer	1	1
ESBL producer	0	2
Fluoroquinolone-resistant	0	1
Pseudomonas aeruginosa	4 (6)	5 (25)
Ceftazidime-resistant	0	0
Meropenem-resistant	0	0
Ciprofloxacin-resistant	1	0
Cutibacterium acnes	8 (12.3)	0 (0)
Enterococcus faecalis	3 (4.6)	7 (35)
Other Streptococci	0 (0)	5 (25)
Anaerobic enteric bacteria	0(0)	5 (25)
Bacteroides spp		3
Other		2

Pathogen	Monomicrobial infection (n; % monomicrobial)	Polymicrobial infection (n; % polymicrobial)

Sommaire

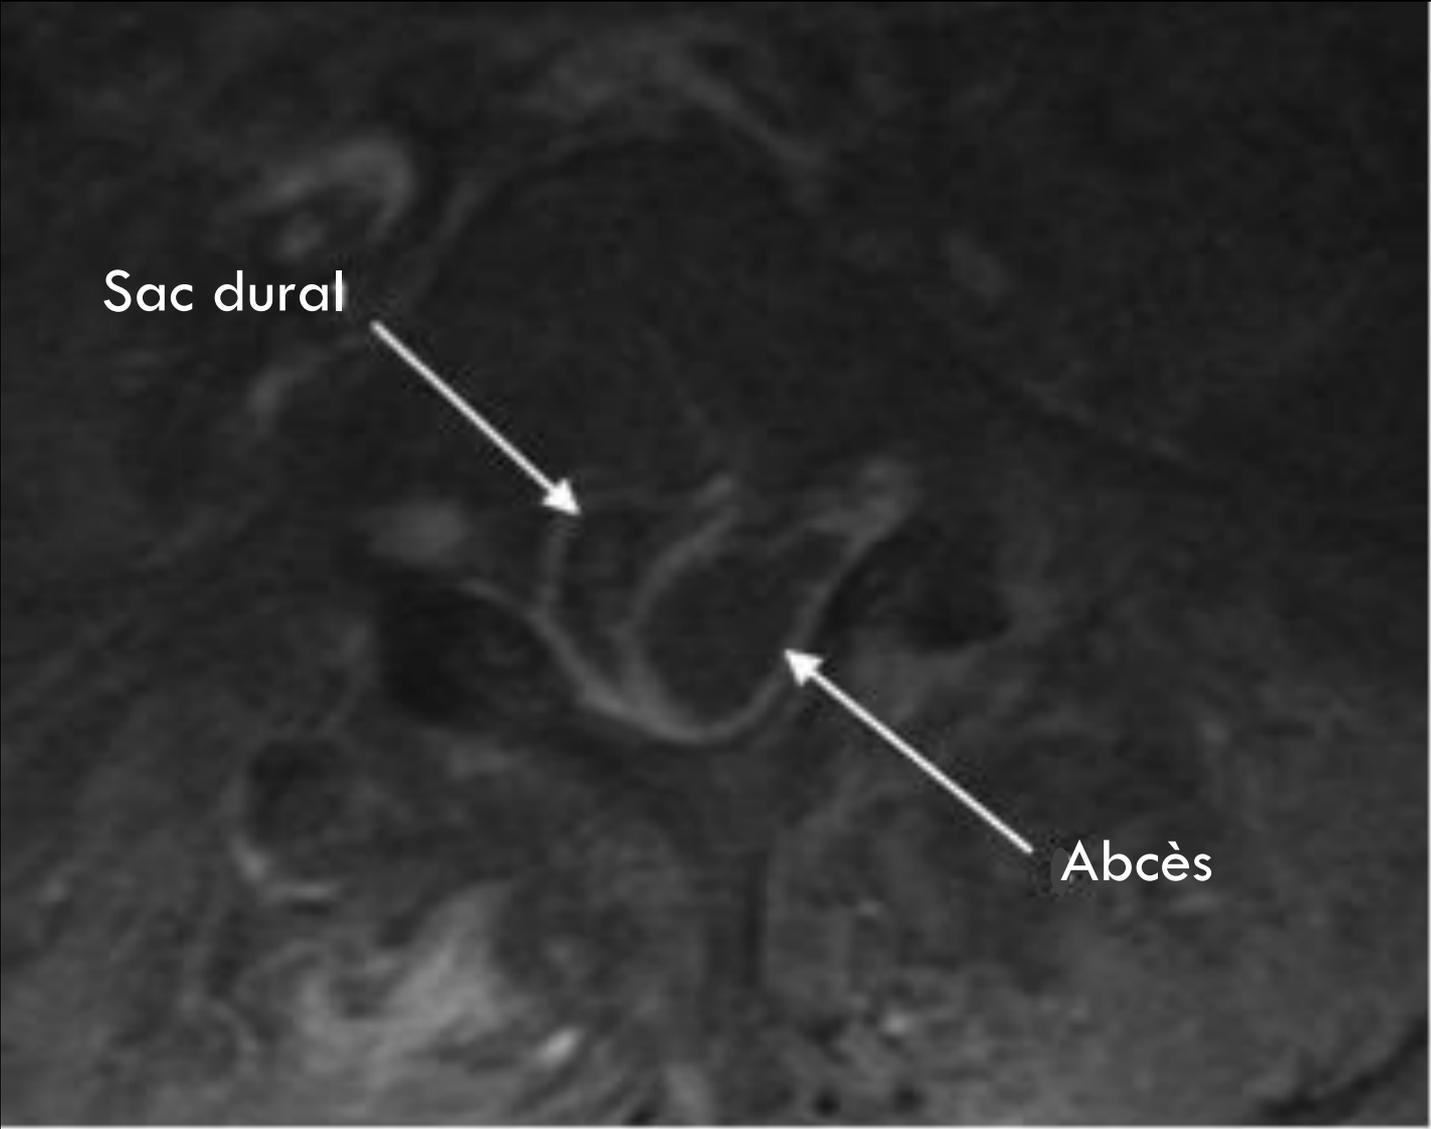

- 1 De quoi parle-t-on ?
- 2 Quand opérer ?

Indications consensuelles

- (Nécessité d'un diagnostic bactériologique)
- Déficit neurologique
- Défaillance mécanique
- Présence d'un abcès épidual

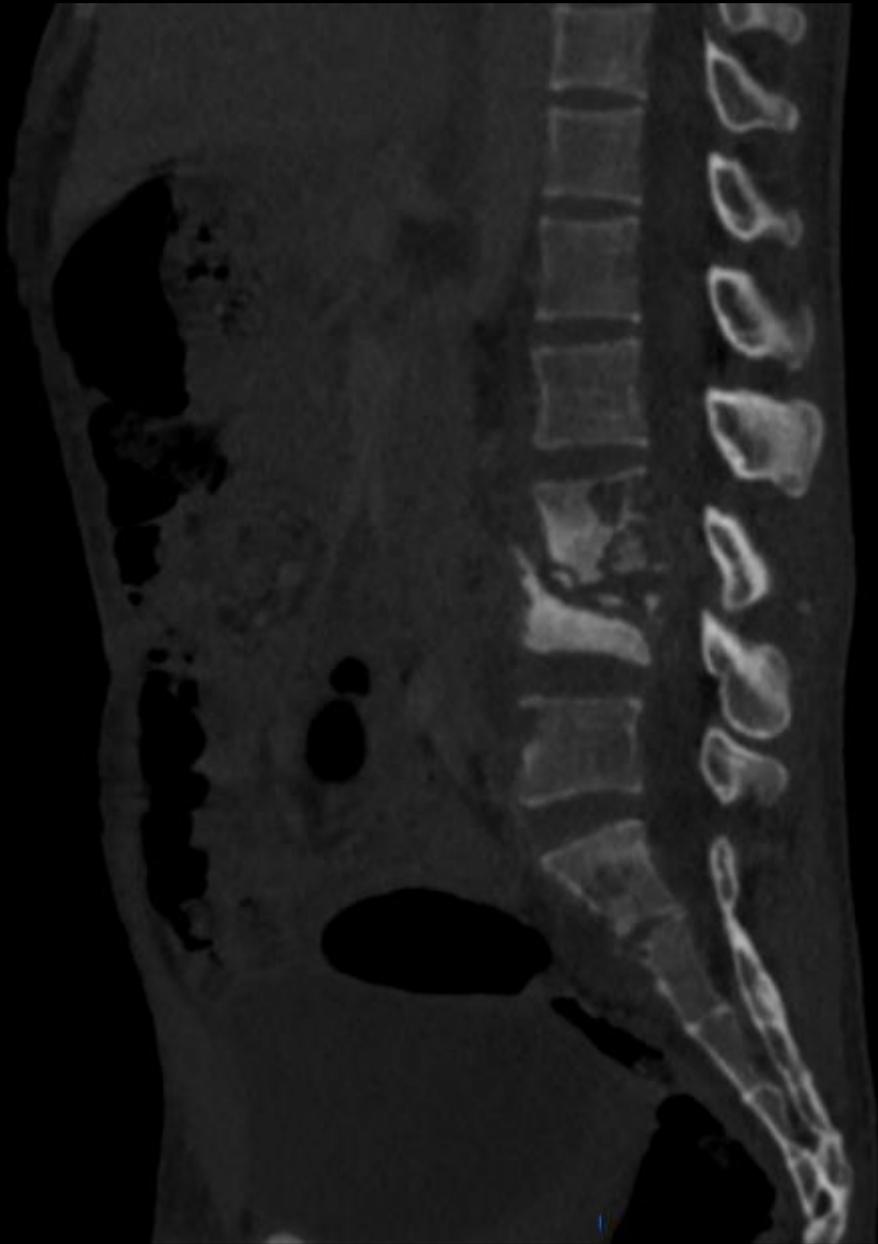

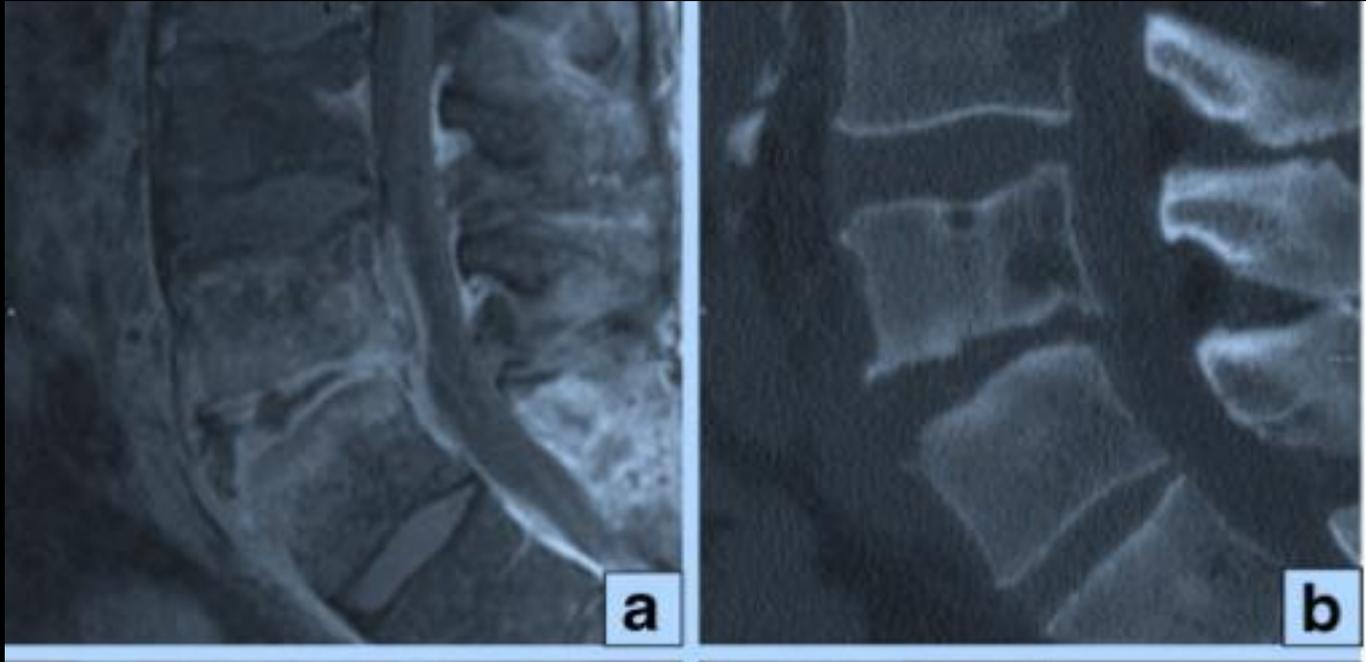

Sac dural

Abscès

Extension d'indications

- Spondylodiscites multi-étagées
- Rachialgies importantes

PAS D'AUGMENTATION DU RISQUE D'ECHEC SEPTIQUE APRES INSTRUMENTATION

Spinal Instrumentation in Patients with Primary Spinal Infections Does Not Lead to Greater Recurrent Infection Rates: An Analysis of 118 Cases, Bydon M, World Neurosurgery, 2014

Evaluation du terrain

- 30% de bactériémie
- 10 % d'endocardite
- 3- 7 % de mortalité

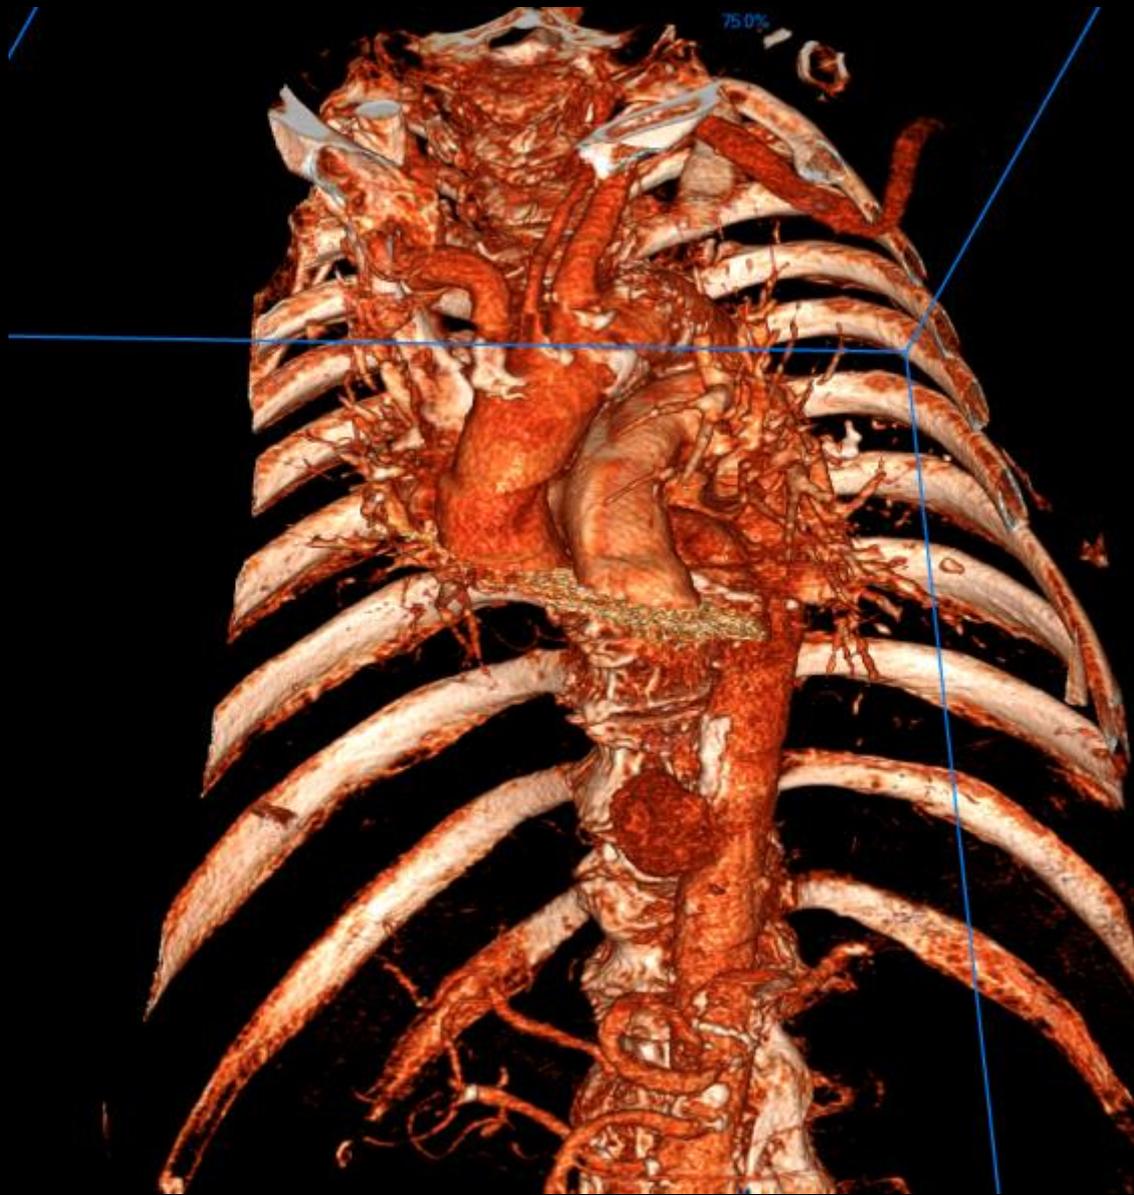

Grammatico L, Epidemiology of vertebralosteomyelitis (VO) in France: analysis of hospital-discharge data 2002–2003. *Epidemiol Infect* 2008

Incidence and risk factors for mortality of vertebral osteomyelitis: a retrospective analysis using the Japanese diagnosis procedure combination database, Akiya:a T, *BMJopen*, 2013

Long-term prognosis and causes of death after spondylodiscitis: A Danish nationwide cohort study, Aagaard T, *Infectious diseases*, 2016

Take home messages

- Travailler ensemble **avec des objectifs communs**
- Indications chirurgicales de plus en plus larges..
- Maitriser les techniques et s'adapter à la modernité
- Risque lié au patient pas au matériel
